### EXAMINER'S AMENDMENT

1. This Office Action is responsive to the Amendment filed December 3, 2004. The Examiner acknowledges the amendments to the Specification and the amendments to Claims 1-4, 6, 7 and 10. Claims 1-23 are pending.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In paragraph [0010], line 17, "segments 54, 52" has been changed to --segments 52, 56--.

3. The following is an examiner's statement of reasons for allowance:

No prior art of record teach or fairly suggest an apparatus including at least one monofilament wire-form having an expanded configuration pre-formed with multiple lobes arranged in a radially symmetrical staggered sequence along a center line corresponding to a center line through a catheter such that each lobe extends from the center line to an apex adapted to engage a wall of a body lumen, and a collapsed configuration where the proximal and distal ends of the wire-form are drawn apart to form the wire-form compactly about the center line, where the monofilament wire-form is adapted to radially center a treatment region of a brachytherapy catheter in a body lumen.

Art Unit: 3736

The closest prior art of record comprises U.S. Patent No. 5,350,419 (Bendel et al) and U.S. Patent No. 6,607,479 (Barnhart). Bendel et al. teach a monofilament formed of a shape memory material having a portion with a similar shape and properties to the claimed invention of the present application; however, the anchoring portion of the lead of Bendel et al. does not appear to be capable of housing a catheter along its "center line" nor of centering a catheter within a body lumen. Barnhart teaches a brachytherapy positioning system having a plurality of sinusoidal wire-forms disposed about a radiation source; however, none of the wire-forms of Barnhart appear to have multiple lobes arranged in *a radially symmetrical staggered sequence along a center line* as defined in paragraphs [0008] and [0009] of the specification of the instant application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles A. Marmor, II whose telephone number is (571) 272-4730. The examiner can normally be reached on M-TH (7:00-5:00).
